

# Initial Question Catalogue

1. Do you think the classification of internal stages is missing a stage of greybox fuzzing?
2. Which internal stages can be composed and visualized together to understand their relationship?
3. What questions would you ask to understand each internal stage?
4. What questions would you ask to understand the relationship between the internal stage compositions?
5. Would you think a visualization framework helps to understand internal stages of fuzzing?
6. If such a visualization framework is implemented, would you use it?
